

Ginkgo Capsules

Ginkgo Capsules High Quality Practitioner-Only Capsules

Phytomed Ginkgo capsules are made from premium New Zealand-grown Ginkgo leaves, boasting one of the highest phytochemical profiles globally. This high potency, practitioner-only product delivers guaranteed levels of key actives, including ginkgo flavonglycosides & the terpene lactones - ginkgolides and bilobalide.

Ginkgo is one of the most widely studied medicinal herbs and there is a vast body of research supporting its numerous health benefits. As well as being a well-established cognition enhancer & neuroprotective agent, recent studies & clinical trials have demonstrated significant cardioprotective & hepatoprotective properties, believed to be related to its potent antioxidant action.

Ginkgo has also demonstrated wide ranging cytoprotective and anti-apoptotic effects, supporting its use as a chemoprotective agent. In addition, it has demonstrated the ability to sensitise cancer cells to cytotoxic drugs, indicating possible use as an adjunct for chemotherapy. Radio & photoprotective actions - superior to Green tea extracts - have also been demonstrated recently.

For more information on recent research into the world's oldest living tree, refer to our popular 2012 seminar: "New Uses for Old Favourites" – available through Phytomed.
